

Since 18th May 2026, a total of four shore power units (400 V) have been available at the two public mooring places in Aschach (river km 2,160.2 – 2,159.7; right bank and river km 2,159.5 – 2,158.8; right bank). Each of these shore power units has three 16 A, 32 A and 63 A (CEE) sockets on the underside, which also allows for connection when vessels are moored in multiple rows.

To enable skippers to monitor their own electricity consumption, electricity meters have been installed which can be read on site. Shore power will be provided free of charge until further notice.

via donau – Österreichische Wasserstraßen-Gesellschaft mbH would appreciate feedback regarding the operation and functionality of the units (contact: +43 / 50 / 43 21 – 9100, landstrom@viadonau.org).

The construction of the facilities was co-financed by the European Union's "Connecting Europe Facility" as part of the "FAIRway Danube II" project.
